

- ▶ The cost of the conference is more than 30 tons of carbon (around 20 people come from far away).
- ▶ To have a habitable planet, we have to go down to **2 tons of carbon per person and per year**. Experts on the subject, **like us in the field of probability and geometry**, agree at 97% !
- ▶ Even if the conference is scientifically incredible, **how do we reduce conference emissions to have a habitable planet for future generations ?** .
