

In this Maple file, we compute the evolution equations for the second element of the Painlevé 2 hierarchy using the compatibility equation of the Lax system. We also obtain the expression of the Lax matrices in the geometric gauge without apparent singularities.

The deformation operator is

$$\mathcal{L} = \hbar (\alpha_{14} \partial_{t_{\infty}^{(1)},4} + \alpha_{24} \partial_{t_{\infty}^{(2)},4} + \alpha_{13} \partial_{t_{\infty}^{(1)},3} + \alpha_{23} \partial_{t_{\infty}^{(2)},3} + \alpha_{12} \partial_{t_{\infty}^{(1)},2} + \alpha_{22} \partial_{t_{\infty}^{(2)},2} + \alpha_{11} \partial_{t_{\infty}^{(1)},1} + \alpha_{21} \partial_{t_{\infty}^{(2)},1})$$

Solving the compatibility equation to obtain the Hamiltonian evolutions

Summary of previous files: We have the expression for some coefficients of the Lax matrix L and of A.

(2.1.4)

Computation of the auxiliary matrices $\text{td}\{A\}_1$ and $\text{td}\{A\}_2$

After symplectic reduction, there are two independent non-trivial direction corresponding to either ∂_{τ_1} or ∂_{τ_2} . This gives rise to two auxiliary matrices $\text{td}\{A\}_1$ and $\text{td}\{A\}_2$.

Warning: Compiling both cases create interferences. Skip the subsection relatively to τ_1 if you want the deformation relatively to τ_2
