Abstract. In this note we describe how to format papers for publication in the international research journal “Mathematical modelling of natural phenomena”.

Key words: key words, no capital letters

AMS subject classification: 12A34, 56B78

1. First Section

1.1. First Subsection

In this note we describe how to format papers for publication in the journal MMNP.

1.2. Second Subsection

You should use the text editor Latex and format your latex file similar to this sample file.

Equations should have numbers only if they are referred to:

$$a = b. \tag{1.1}$$

It is better to label them in order to avoid difficulties with their numbering.

$$a = b. \tag{1.2}$$

1.2.1. First Subsubsection

Example of Subsubsection.

2. Second Section

The main result of this paper is given by the following theorem.

Theorem 1. *All papers should be formatted in the same way.*

Proof. Suppose that there are papers prepared in a different way. Then it will increase the work for the editors and for the publisher and will delay the publication.

Remark 2. *Figures included in the paper should be high quality eps (encapsulated postscript) files. They should be accompanied by figure captions and by the explanation in the text of the paper.*

Proposition 3. *The references should be given in the alphabetic order [1].*

When you submit a paper, please send only the pdf file. If the paper is accepted, then send pdf, latex and eps files. When you refer the reader to a figure do it this way: Figure 1.

Acknowledgements

The editors are grateful to the authors for following the instructions.
