ERC EYAWKAJKOS – Call for post-doc applications

The project **Everything You Always Wanted to Know About the JKO Scheme (EYAWKAJKOS)** has been awarded an Advanced ERC Grant by the European Commission. This funding allows to hire several young researchers and in particular one post-doc will be hired in 2026. The selected postdoc will work at [Institut Camille Jordan](#), based in the Lyon 1 campus in La Doua. Applications by recent PhDs are welcome and should be sent to the PI at the email address santambrogio@math.univ-lyon1.fr by **November 30th, 2025**. The selection will be done during December could include interviews for shortlisted candidates, and will come out either with a ranking or with the decision to postpone the hiring to 2027.

- **Research topics:** EYAWKAJKOS is focused on the JKO scheme for Wasserstein gradient flows. It includes the study of existence, regularity and asymptotic behavior for the corresponding PDEs, uniform estimates or convergence results on the solutions of the JKO scheme, and numerical approximations exploiting the JKO scheme for both well-known equations (Fokker-Planck, porous medium, ...) and less classical ones (from population dynamics, data analysis...). Details on the full research program of the project can be found [here](#) and more general information on EYAWKAJKOS [here](#).
- **Duration:** the post-doctoral contract can be established for a duration of 24 to 36 months, depending on the candidate's project and on funding constraints (EYAWKAJKOS is supposed to end by August 2028 but an extension has been required). The starting date can be between March and December 2026.
- **Eligibility:** holding a PhD at the starting date of the contract, obtained no more than 5 years before.
- **Salary:** salary will be adjusted to the experience and to the selected researcher. For recent PhDs, the gross monthly salary will be of approximately 3200 euros.¹
- **Teaching duties:** the position comes with no teaching load. The maths department in Lyon 1 is always in need of teachers for undergraduate exercise classes, and postdocs can apply for teaching assignments. Such a teaching is paid extra and is fully optional. Classes are usually given in French.
- **Research funds:** the successful applicant will be entitled to use research funds from this same project for visits, invitations, and research-related expenses. The standard endowment is 3500 euros/year but can be negotiated if needed. A laptop can also be bought with research funds and provided.
- **Application:** please send by email a CV, a list of publications, a research statement, and a cover letter. The cover letter should contain the proposed dates for the doctoral contract, and the contact details of two scholars who could be contacted for reference purposes, if needed.

¹A Gross salary of 3200 euros/month should give a "net" salary of 2500 euros approx, where net means the standard net notion in France : after social contributions, before income tax. The income tax, whose amount strongly depends on the family situation of the employee and ranges from 0% to 8% approx on salaries of this order of magnitude, is directly deducted from the salary, and is then adjusted after the tax declaration which is done in May of the year $n + 1$ for the income of the year n .
