Question:

Homogeneity & prime models

Existential homogeneity & prime models

Two-generated torsion-free hyperbolic groups

Question: What can be said about the \exists -homogeneity and "primeness" of two-generated torsion-free hyperbolic groups?

◆□▶ ◆□▶ ◆三▶ ◆三▶ ○三 のへ⊙

Homogeneity & prime models

Existential homogeneity & prime models

Two-generated torsion-free hyperbolic groups

Question: What can be said about the \exists -homogeneity and "primeness" of two-generated torsion-free hyperbolic groups?

Definition

A group G is said to be co-hopfian, if any injective endomorphism of G is an automorphism.

Homogeneity & prime models

Existential homogeneity & prime models

Two-generated torsion-free hyperbolic groups

Question: What can be said about the \exists -homogeneity and "primeness" of two-generated torsion-free hyperbolic groups?

Definition

A group G is said to be co-hopfian, if any injective endomorphism of G is an automorphism.

That is a group is co-hopfian if it does not contain a subgroup isomorphic to itself.

Quasi-axiomatizable groups

Definition (A. Nies)

A finitely generated group G is said to be Quasi-Axiomatizable if any finitely generated group which is elementary equivalent to G is isomorphic to G.

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□ ● ● ●

Question (A. Nies):

Homogeneity & prime models

Existential homogeneity & prime models

Quasi-axiomatizable groups

Definition (A. Nies)

A finitely generated group G is said to be Quasi-Axiomatizable if any finitely generated group which is elementary equivalent to G is isomorphic to G.

Question (A. Nies): Is there a f.g. group which is prime but not QA?

Constructibility over the algebraic closure

Question (Z. Sela, 2008): Is it true that acl(A) = dcl(A) in free groups? **Remarks.** Let Γ be a torsion-free hyperbolic group and $A \subseteq \Gamma$.

Constructibility over the algebraic closure

Question (Z. Sela, 2008): Is it true that acl(A) = dcl(A) in free groups?

Remarks. Let Γ be a torsion-free hyperbolic group and $A \subseteq \Gamma$.

• $acl(A) = acl(\langle A \rangle)$ and $dcl(A) = dcl(\langle A \rangle)$.

Constructibility over the algebraic closure

Question (Z. Sela, 2008): Is it true that acl(A) = dcl(A) in free groups?

Remarks. Let Γ be a torsion-free hyperbolic group and $A \subseteq \Gamma$.

• $acl(A) = acl(\langle A \rangle)$ and $dcl(A) = dcl(\langle A \rangle)$. Hence, we may assume that A is a subgroup.

Constructibility over the algebraic closure

Question (Z. Sela, 2008): Is it true that acl(A) = dcl(A) in free groups?

Remarks. Let Γ be a torsion-free hyperbolic group and $A \subseteq \Gamma$.

• $acl(A) = acl(\langle A \rangle)$ and $dcl(A) = dcl(\langle A \rangle)$. Hence, we may assume that A is a subgroup.

• If $\Gamma = \Gamma_1 * \Gamma_2$ and $A \leq \Gamma_1$ then $acl(A) \leq \Gamma_1$.

Constructibility over the algebraic closure

Question (Z. Sela, 2008): Is it true that acl(A) = dcl(A) in free groups?

Remarks. Let Γ be a torsion-free hyperbolic group and $A \subseteq \Gamma$.

- $acl(A) = acl(\langle A \rangle)$ and $dcl(A) = dcl(\langle A \rangle)$. Hence, we may assume that A is a subgroup.
- If $\Gamma = \Gamma_1 * \Gamma_2$ and $A \leq \Gamma_1$ then $acl(A) \leq \Gamma_1$. Similarly for dcl(A).

Constructibility over the algebraic closure

Question (Z. Sela, 2008): Is it true that acl(A) = dcl(A) in free groups?

Remarks. Let Γ be a torsion-free hyperbolic group and $A \subseteq \Gamma$.

- $acl(A) = acl(\langle A \rangle)$ and $dcl(A) = dcl(\langle A \rangle)$. Hence, we may assume that A is a subgroup.
- If Γ = Γ₁ * Γ₂ and A ≤ Γ₁ then acl(A) ≤ Γ₁. Similarly for dcl(A). Hence, we may assume that Γ is freely A-indecomposable.

Constructibility over the algebraic closure

Question (Z. Sela, 2008): Is it true that acl(A) = dcl(A) in free groups?

Remarks. Let Γ be a torsion-free hyperbolic group and $A \subseteq \Gamma$.

- $acl(A) = acl(\langle A \rangle)$ and $dcl(A) = dcl(\langle A \rangle)$. Hence, we may assume that A is a subgroup.
- If Γ = Γ₁ * Γ₂ and A ≤ Γ₁ then acl(A) ≤ Γ₁. Similarly for dcl(A). Hence, we may assume that Γ is freely A-indecomposable.

• If A is abelian then $acl(A) = dcl(A) = C_{\Gamma}(A)$.

Constructibility over the algebraic closure

Question (Z. Sela, 2008): Is it true that acl(A) = dcl(A) in free groups?

Remarks. Let Γ be a torsion-free hyperbolic group and $A \subseteq \Gamma$.

- $acl(A) = acl(\langle A \rangle)$ and $dcl(A) = dcl(\langle A \rangle)$. Hence, we may assume that A is a subgroup.
- If Γ = Γ₁ * Γ₂ and A ≤ Γ₁ then acl(A) ≤ Γ₁. Similarly for dcl(A). Hence, we may assume that Γ is freely A-indecomposable.
- If A is abelian then $acl(A) = dcl(A) = C_{\Gamma}(A)$. Hence, we may assume that A is nonabelian.
